

# Connected Care Cloud Engagement Overview

## Client Challenge:

The client wanted to augment their technical team with expertise in system design for microservices deployed to Amazon Web Services.

## Solution:

In the role of Technology Leads, we work with stakeholders to iteratively drive design specifications from intake requirements. These design artifacts are then used to inform the implementation and deployment of the completed services into the cloud environment.

## Result:

Successful quarterly deployments of new, and enhancements to existing components to expand the cloud service offering while expanding on the AWS technologies within the stack.

**Technologies:** Amazon Web Services

**Software Tools:** Node.js, Docker, AWS Fargate, AWS Lambda

**Solution Type:** Architecture & Design

**Industry:** Pharma
