

SSAS

Engagement Overview

Client Challenge:

The client needed to be more responsive to the engine parts market and recognized the need to replace an outdated business intelligence tool.

Solution:

Theoris implemented Microsoft BI with SQL Server 2012 to extract the part numbers and sales data from the global manufacturing and distribution centers, transforming the staged data with proprietary business and processing SSSA 2012 tabular databases.

Result:

The databases are refreshed daily allowing business users to take advantage of global cost and order systems data. Driving customer efficiency and speed to market.

Software Tools: SQL Server, Microsoft BI

Solution Type: Customized Package Implementation

Industry: Manufacturing
